1 The Text

“All security systems have flaws.Many of them are not known.The less flaws there are in a system the more secure it is.When flaws are known they can be fixed. Hackers try and find flaws in system. Therefore if hackers work for the systems, the system becomes more secure. ”

The text is taken from , <http://sharing-programmer.blogspot.com/2016/09/the-security-logic.html>.

2 Inferred Information

- Hackers working for the system can reveal the hidden flaws in the system.

3 The Argument

There is one conclusions in this argument.

Conclusion:

- Having hackers working for the system makes the system more secure

If there are hackers in the system then according to the logic the flaws are revealed which are fixed.This mean there are less flaws which means that the system has become more secure. So yes, the argument is valid.
